

A Cargo pocket may be applied to a skirt, pant, dress or jacket

It is in effect a Patch pocket.

It also has an optional pocket flap.

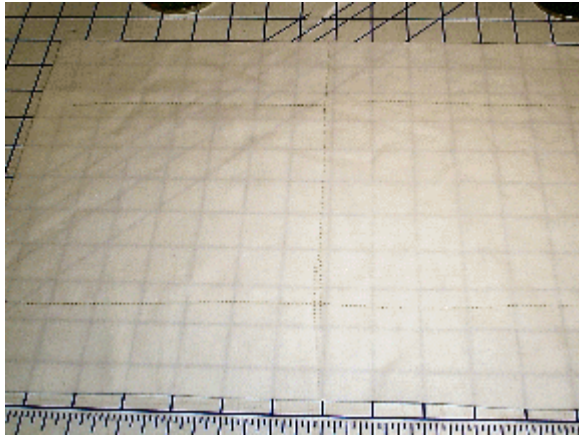

It may be attached to the garment at only the top inside edge or also along the back inside side seams.

You may define the width and the depth of the pocket.

First prepare the bag and construct then attach to your garment.

Fold one and two are along the long vertical length of the pocket and fold in towards center to form the expanding side seam. PRESS

Fold 3 is the horizontal midline which folds up creating a pocket bag front and back. PRESS

Transfer markings to fabric

Fold

Press Pin

Then

Turn inside out and stitch

Turn back to right side

Finally pinch the upper corners and bar tack

The graphics depict a muslin pocket not something finished for a garment.

Tips:

It is much easier to pre-finish the raw edges while it is lying flat. I suggest turning the long raw edges and either do a narrow rolled hem or serge.

I would turn the top edge and bind with bias or turn in and stop stitch.

A chop stick makes an ideal point turning tool. Don't use your scissors!

The pocket is to be centered over the out seam of the pant leg (walking shorts) or can be applied to a vest or other garment.

You may stitch around the lower inside layer of the pocket to the garment or just secure with bar tacks at all 4 corners thru the inside layer only.

The pocket flap is attached to the garment (not the pocket) right above the pocket and centered.

Velcro can be applied to the inside edge of the pocket flap and outside edge of the pocket.
